***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 18-20, drawn to an enhanced electron field emission Spindt tip, classified in class 313, subclass 293.
- II. Claims 7-17, drawn to method for microfabricating an enhanced electron field emission Spindt tip, classified in class 445, subclass 24.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Groups I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the first metal layer can be plated on a sacrificial substrate, and then be patterned. The first metal layer could then be attached to the substrate (non-sacrificial) and then etch or dissolve away the sacrificial substrate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Timothy F. Myers on May 6, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
